-  Green LED - Flashes when hands free mode is on.

## Setting up and cleaning the system telephones, inserting the marking strips

### Location

- Place the system telephones in a suitable location. Pay attention to the following points:
- Do not install them where they may be splashed by water or chemicals.
  - Plastic feet of the telephones: Your unit was produced for normal conditions of use. The plastic feet of the telephone may be detrimentally influenced by chemicals that are

used to produce furniture or which are used in the production of care agents. In certain circumstances, the feet of the telephones altered by external influences may leave nasty traces. Understandably, we cannot assume any liability for such damage. Therefore, use a slip-proof support surface for your telephones, particularly on new furniture or on furniture that has been treated with care agents.

### Cleaning

- You can clean your telephones easily. Pay attention to the following points:
- Wipe the telephone with a slightly moist cloth or use an anti-static cloth.

- Never use a dry cloth (charges may produce defects in the electronic circuitries).
- In any case, make sure that moisture does not penetrate into the interior (switches and contacts may be damaged).

### Inserting the marking strips of the function keys

Place your finger nail between the window and the telephone housing at the top. Pull down the window so that it bends outwards.

Now you can remove it.

Insert the labelling strip. You can print the appropriate labels on your PC with the configuration program TK-Set.

To insert, place the window in the slit at the bottom. Press down to bend out and insert the other end.
